Chapter I

Foreword

This project is related to a specific legal contract available in France. If you are not currently in a French campus, you should not see this project. If you are in a French campus, you have to verify with your local pedagogical staff if this project is currently available for you (it may not be the case).

Chapter II

Apprenticeship

This project is about apprenticeship in France, including both “contrat d’apprentissage” and “contrat de professionnalisation”. This is a part-time professional experience that leads you to an homologated degree. It is an interesting formula as it allows you to start your professional career, earn money, and still keep some time available to progress in your curriculum to reach the degree. It is also interesting for companies that receive some public money and tax reductions.

Access to this apprenticeship formula comes with some constraints:

- from a pedagogical point of view: see below
- from an administrative point of view: see your local corporate relationship team

Chapter III

Pedagogical constraints

To register to this apprenticeship project, you need to:

- be a currently enrolled student on the *42cursus* curriculum
- not be an alumni
- be in the second part of the curriculum, i.e. your common core is validated
- have completed your *Internship I* project
- be at least level 16 (a higher level is advised)

In order to lead you to the aimed certificate, you need to fulfil all the constraints of the certificate by the end of the apprenticeship contract. The description of the constraints for each certificate is available in the FAQ on the intranet. You may have already completed some constraints before applying to this project, and it's totally fine. But be fully aware that the remaining constraints for the aimed certificate will have to be completed by the end of this apprenticeship contract. A specific schedule describing the days in the company and the days at school will be established for your contract, thus defining the amount of time to complete the required projects. It is recommended that you carefully plan when each project will take place to ensure a regular progression and a final success.

Your local staff will organize some regular meetings with you to verify that your progress in the curriculum is good enough to reach the requirements of the certificate. Also, a regular meeting will be organized with your company to ensure that our professional integration is good. Each feedback from the company will lead to an increase of the final mark of this apprenticeship project, from 0% at the beginning of the apprenticeship contract and up to 100% at the end if the evaluation is good. This will also increase your personal XP on a regular basis, to help you monitor your global progression.

Please note that, while the access to the project reflects the access to the apprenticeship program, the validation of this apprenticeship project does not mean a successful apprenticeship. The project XP and validation only represent the professional experience, and with a project fully validated but missing requirements for the final RNCP certificate, your apprenticeship will be considered as a failure.

Finally, some administrative restrictions (age, nationality, ..) may apply to access this apprenticeship program. Please refer to your local staff for such details.
