Chapter I

Foreword

Vincent: And you know what they call a... a... a Quarter Pounder with Cheese in Paris?
Jules: They don't call it a Quarter Pounder with cheese?
Vincent: No man, they got the metric system. They wouldn't know what the fuck a Quarter Pounder is.
Jules: Then what do they call it?
Vincent: They call it a Royale with cheese.
Jules: A Royale with cheese. What do they call a Big Mac?
Vincent: Well, a Big Mac's a Big Mac, but they call it le Big-Mac.
Jules: Le Big-Mac. Ha ha ha ha. What do they call a Whopper?
Vincent: I dunno, I didn't go into Burger King.

Chapter II

General guidelines

II.1 What is an open project?

This project involves selecting a topic of your choice to collaborate on. The goal is to form a group to work together on a subject that interests all of you, within a specified timeframe. It's also an opportunity to pursue something meaningful to you.

Your open project is split in 2 steps:

- The first step entails choosing your project. Following the outlined guidelines, you'll define its specifications. This step is peer-validated, so ensure clear documentation for your peers. You must compile a comprehensive list of project requirements, subject to verification upon project completion.

- Your project must adhere to the specified timeframe, representing a duration of 6 months of work.

- Open Project is not a full-time endeavor. We suggest allocating 2 to 3 days per week and dividing the workload based on the number of students in the group.

- After the initial project is validated, you gain access to the second subproject and its repository. From this point onwards, you have 6 months to complete the project.

- Finally, the final evaluations will check if the announced requirements and specifications are fulfilled.
